a wide variety of nodes in a millimeter-wave integrated circuit (mmic), a substantial amount of time for each circuit is required. thus, it is obvious that a much more flexible network analysis system for testing electrical devices and circuits operating . in and above the millimeter-wave regime will soon be required. external electro-optic **millimeter-wave circuit design for radar transceivers** - communication, radar, and imaging circuits operating at millimeter-wave frequencies (30-300ghz) to be successfully integrated in commercial silicon processes [1-4]. it seems likely that the commercial success of wireless communications below 6ghz will cause a large portion of future millimeter-wave circuits to be communication transceivers. **144 ieee journal of solid-state circuits, vol. 40, no. 1 ...** -
